K-LASER BLUE DERMA PIGMENTATION

BLUE LASER - 445nm
High Affinity With Pigments

Precision
Less Inflammation
Less Risk Of Infection

What Does It Feel Like?

The laser beam is waved above the skin pigmentation once or several times for a few seconds. It feels like little pricks on the skin. No numbing cream is required.

What to expect Post-Laser?

The Blue K-Laser has a very high affinity to catch the melanin pigment in the skin.

- ➔ Low to no discomfort post-laser.
- ➔ Precision to protect the surrounding tissues
- ➔ Pigments becomes darker in the next few days then gently shade away in the following weeks.

How Many Sessions?

Only one session is usually required. Sometimes a repeat a month later may be needed.
